#### What Is Parkinson's?

#### Causes

#### **Statistics**

10 Early Signs of Parkinson's Disease

## Movement **Symptoms**

# Non-Movement **Symptoms**

- Anxiety
- Apathy
- Breathing & Respiratory Difficulties
- Cognitive Changes
- Constipation & Nausea
- Dementia
- Depression

# Non-Movement Symptoms

Parkinson's disease (PD) is generally thought of as a disease that only involves movement. But in addition to motor symptoms such as slowness of movement, tremor, stiffness and postural instability, most people develop other health problems related to Parkinson's. These symptoms are diverse and collectively known as

- Fatigue

non-motor symptoms.

- Loss of Smell
- Pain
- Skeletal & Bone Health
- Skin Changes
- Sleep Disorders
- Small Handwriting
- Speech & Swallowing **Problems**
- Urinary Incontinence
- Vertigo and Dizziness
- Vision Changes
- Weiaht Management

Join us in our initiatives to accelerate progress on

Hallucinations/Delusions. While family and friends may not be able to see these symptoms, it is important to realize that non-motor symptoms are common and can be more troublesome and disabling than motor symptoms. Some symptoms, such as loss of smell, constipation, depression and REM sleep behavior disorder can occur years before the diagnosis of PD.

# Non-motor symptoms can include:

- Cognitive changes: problems with attention, planning, language, memory or even dementia
- Constipation
- Early satiety: feeling of fullness after eating small amounts
- Excessive sweating, often when wearing off medications
- Fatigue
- Increase in dandruff (seborrheic dermatitis)
- Hallucinations and delusions
- Lightheadedness (orthostatic <u>hypotension</u>): drop in blood pressure when standing
- Loss of sense of smell or taste
- Mood disorders, such as depression, anxiety, apathy and irritability
- Pain
- Sexual problems, such as erectile dysfunction
- Sleep disorders, such as insomnia, excessive daytime sleepiness (EDS), REM sleep behavior disorder (RBD), vivid dreams, Restless Legs Syndrome (RLS)
